# Simple guide to connect your device to the Sound System

More often than not, the sound system just needs to be switched on at the wall and the correct power switches on the system and Bluetooth button will already be on. If this is the case, you simply find the Bluetooth menu on your device, and select 'DN-200BR'.
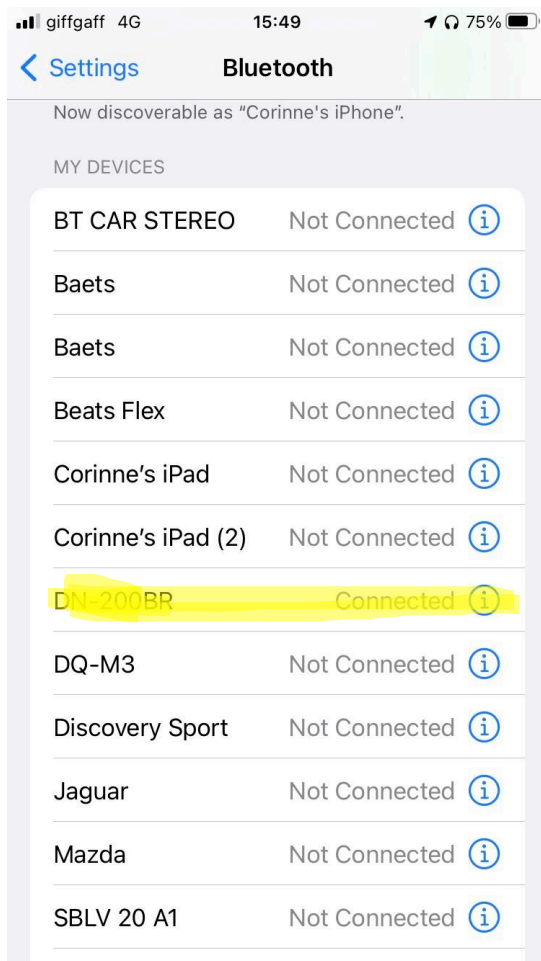

However, if the sound system is switched off by the buttons on it, follow these steps:

1) Ensure it is switched on at the wall
2) Turn on these 4 buttons (Red circles)

3) Ensure the 'Bluetooth' button is depressed (Green circle)

4) Go to your devices Bluetooth setting and select 'DN-200BR'

5) This will connect your device to the system and you can adjust the volume using the below instructions.

Volume

To adjust the volume either:

1). Use the volume button on your device

Or

2). Use this button on the sound system
